

ENERGY + INNOVATION INITIATIVE

American Friends of Bucerius has launched the Energy + Innovation Initiative in 2014 to promote an interdisciplinary approach to current issues in global energy. Policy and technological developments in the energy sector have fundamentally changed the energy landscape, and the future of energy security and development has become a central focus of domestic, regional, and global policymaking. For the previous two years American Friends of Bucerius led a discussion series on Energy & Law in conjunction with Linklaters LLP, addressing these issues from the legal and transatlantic perspectives. We have now taken the next step by implementing the Energy & Innovation Initiative.

This multi-faceted program continues the discussion events, but has moved beyond the legal and legislative issues to include changes to the “business” of energy and the impact of regulatory decisions on investments in new energy technology. This initiative is designed to create a platform for exchange and discussion among academia, policymakers, and practitioners, while highlighting various aspects of the energy sector to the greater public.
